| #     | / Reference     |  |           | ered         |
|       | Literature      |  | Reference | Cumulative   |
| 1     |                 | Different Types of Fuels used for steam generation,    | -         |              |
| 2     |                 | Equipment for burning coal in lump form, stokers,      |           |              |
|       | -               | different types,                                       | -         |              |
| 3     |                 | Oil burners, Advantages and Disadvantages of using     |           |              |
|       | TB2 : 1.1 to    | pulverized fuel,                                       | -         |              |
| 4     | 1.14            | Equipment for preparation and burning of pulverized    | 13.5%     | 13.5 %       |
|       | TB1:1.3, 1.7    | coal, unit system and bin system.                      | -         |              |
| 5     |                 | Pulverized fuel furnaces, cyclone furnace,             |           |              |
| 6     |                 | Coal and ash handling,                                 |           |              |
| 7     |                 | Generation of steam using forced circulation, high and |           |              |
|       |                 | supercritical pressures.                               |           |              |
| 8     |                 | A Brief Account Of Benson, Velox Schmidt Steam         |           |              |
| 9     |                 | Generators.  |           |              |
|       | -               | Chimneys: Natural, forced, induced and balanced draft  |           |              |
| 10    |                 | Calculations and numerical involving height of chimney |           |              |
| 11    | TB2 : 2.1 to    | to produce a given draft.                              | 13.5%     | 27%          |
| 11    | 2.8             | Cooling towers and Ponds.                              | -         |              |
| 12    |                 | Accessories for the Steam generators such as           |           |              |
| 12    |                 | Superheaters, De-superheater,                          | -         |              |
| 13    | -               | control of superheaters                                | -         |              |
| 14    |                 | Economizers, Air preheaters and re-heaters.            |           |              |
| 15    |                 | Hydrographs, flow duration and mass curves,            | -         |              |
| 16    |                 | Unit hydrograph and numericals.                        |           |              |
| 17    |                 | Storage and pondage                                    | 11.5%     | 39.5%        |
| 18    | TB2: 4.1 to     | Pumped storage plants, low, medium and high head       |           |              |
| 10    | 4.10            | plants,  |           |              |
| 19    |                 | Penstock, water hammer, surge tanks, gates and         |           |              |
|       |                 | valves.  | 4         |              |
| 20    |                 | General layout of hydel power plants.                  |           |              |
| 21    |                 | Tides and waves as energy suppliers and their          |           |              |
|       |                 | mechanics  |           |              |
| 22    |                 | Fundamental characteristics of tidal power, harnessing |           |              |
|       |                 | tidal energy, limitations.                             | 11.5%     | 51%          |
| 23    | TB2: 7.1 to 7.5 | Principle of working, Rankine cycle, problems          |           |              |
|       | TB1: 7.6        | associated with OTEC.                                  | 4         |              |
| 24    | RB2:7.1 to7.5   | Principle of working, types of geothermal station with |           |              |

|    |                 | schematic diagram   |       |       |
|----|-----------------|---|-------|-------|
| 25 |                 | Problems associated with geothermal conversion            |       |       |
| 26 |                 | scope of geothermal energy                                | -     |       |
| 27 |                 | Photosynthesis, photosynthetic oxygen production,         |       |       |
| 27 |                 | Energy plantation.  |       |       |
| 28 |                 | Biogas production from organic wastes by anaerobic        | -     |       |
| 20 |                 | fermentation  | 11.5% | 62.5% |
| 29 | TB2: 8.1 to 8.6 | classification of bio gas plants                          |       |       |
| 30 |                 | factors affecting bio gas generation                      | -     |       |
| 31 |                 | Thermo chemical conversion on bio mass,                   | -     |       |
| 32 |                 | types of gasifiers  |       |       |
| 33 |                 | Applications of Diesel Engines in Power field             |       |       |
| 34 |                 | Method of starting Diesel engines                         | -     |       |
| 35 | TB2: 3.1 to 3.7 | Auxiliaries like cooling and lubrication system           | 11.5% | 74%   |
| 36 |                 | filters, centrifuges                                      |       |       |
| 37 |                 | Oil heaters, intake and exhaust system                    | -     |       |
| 38 |                 | Layout of diesel power plant.                             | -     |       |
| 39 |                 | Solar Extra terrestrial radiation and radiation at the    |       |       |
| 35 |                 | earth surface, radiation-measuring instruments            |       |       |
| 40 |                 | working principles of solar flat plate collectors         | -     |       |
| 41 |                 | solar pond and photovoltaic conversion (Numerical         | -     |       |
|    |                 | Examples).  |       |       |
| 42 | TB2: 6.1 to     | Properties of wind, availability of wind energy in India, | 14.5% | 88.5% |
|    | 6.12            | wind velocity and power from wind                         |       |       |
| 43 |                 | major problems associated with wind power                 |       |       |
| 44 |                 | wind machines; Types of wind machines and their           |       |       |
|    |                 | characteristics   |       |       |
| 45 |                 | horizontal and vertical axis wind mills                   |       |       |
| 46 |                 | coefficient of performance of a wind mill rotor           |       |       |
|    |                 | (Numerical Examples).                                     |       |       |
| 47 |                 | Principles of release of nuclear energy; Fusion and       |       |       |
|    |                 | fission reactions. Nuclear fuels used in the reactors.    |       |       |
| 48 |                 | Multiplication and thermal utilization factors.           | ]     |       |
| 49 |                 | Elements of the nuclear reactor; moderator, control       |       |       |
|    |                 | rod, fuel rods, coolants.                                 | 11.5% | 100%  |
| 50 | TB2: 5.1 to 5.9 | Brief description of reactors of the following types-     |       |       |
|    |                 | Pressurized water reactor, Boiling water reactor          |       |       |
| 51 |                 | Sodium graphite reactor, Fast Breeder reactor,            |       |       |
|    |                 | Homogeneous graphite reactor and gas cooled reactor       |       |       |
| 52 |                 | Radiation hazards, Shieldings, Radioactive waste          |       |       |
|    |                 | disposal  |       |       |

#### Syllabus for Sessionals:

| Sessional # | Syllabus        |
|-------------|-----------------|
| T1          | Class # 01 – 14 |
| T2          | Class # 14 – 36 |
| Т3          | Class # 37 – 46 |

| 1-7       | TB1: 21-2.7<br>&3.1-3.4 | <b>Introduction And Concepts:</b> Classification of metal working processes, characteristics of wrought products, advantages and limitations of metal working processes. Concepts of true stress, true strain, triaxial & biaxial stresses. Determination of flow stress. Principal stresses, Tresca & Von-Mises Criteria Mises yield criteria, concepts of plane stress & plane strain.   | 12.5%               | 12.5 %     |
| 8-13      | TB1: 15.1-<br>15.12     | <b>Effects Of Parameters:</b> Temperature, strain rate, friction and lubrication, hydrostatic pressure in metalworking, Deformation zone geometry, workability of materials, Residual stresses in wrought products.  |                     | 25%        |
| 14-20     | TB1:19                  | <b>Drawing:</b> Drawing equipment & dies, expression for drawing load by slab analysis, power requirement. Redundant work and its estimation, optimal cone angle & dead zone formation, drawing variables, Tube drawing, classification of tube drawing, simple problems. Cokeless cupola, cupola charge calculations,   | 12.5%               | 37.5%      |
| 21-26     | TB1:<br>18              | <b>Extrusion:</b> Types of extrusion processes, extrusion equipment & dies, deformation, lubrication & defects in extrusion. Extrusion dies, Extrusion of seamless tubes. Extrusion variables, simple problem  | 12.5%               | 50%        |
| 27-32     | TB1:17                  | <b>Rolling:</b> Classification of Rolling processes. Types of rolling mills, Expression for Roiling load. Roll separating force. Frictional losses in bearing, power required in rolling, Effects of front & back tensions, friction, friction hill. Maximum possible reduction. Defects in rolled products. Rolling Variables, simple problems.   | 12.5%               | 62.5%      |
| 33-39     | TB1:20                  | <b>Sheet &amp; Metal Forming:</b> Forming methods dies & punches, progressive die, compound die, combination die. Rubber forming. Open back inclinable press (OBI press), piercing, blanking, bending, deep drawing, LDR in drawing, Forming limit criterion, defects of drawn products, stretch forming. Roll bending & contouring, Simple problems   | 12.5%               | 75 %       |
| 40-47     | TB2:8                   | <ul> <li>High Energy Rate Forming Methods: Principles, advantages and Applications, explosive forming, electro hydraulic forming, Electromagnetic forming.</li> <li>Powder Metallurgy: Basic steps in Powder metallurgy brief description of methods of production of metal powders, conditioning and blending powders, compaction and sintering application of powder metallurgy components, advantages and limitations.</li> </ul> | 12.5%               | 87.5%      |

| 47-52 | 181:10 | <b>Forging:</b> Classification of forging processes. Forging machines & equipment. Expressions for forging pressures & load in open die forging and closed die forging by slab analysis, concepts of friction hill and factors affecting it. Die-design parameters. Material flow lines in forging. Forging defects, Residual stresses in forging. Simple problems. | 12.5% | 100% |

| 55 |                 | Cavitation   | 12% | 74%  |
| 56 | RB3             | Priming, Pumps in Series and Parallel                          |     |      |
| 57 |                 | Problems   |     |      |
| 58 |                 | Problems   |     |      |
| 59 |                 | Centrifugal Compressors: Stage velocity triangles, slip factor |     |      |
| 60 |                 | power input factor, Stage work, Pressure developed             |     |      |
| 61 | <b>Unit – 8</b> | stage efficiency and surging and problems.                     |     |      |
| 62 |                 | Axial flow Compressors: Expression for pressure ratio          | 12% | 86%  |
|    | TB1             | developed in a stage   |     |      |
| 63 |                 | work done factor, efficiencies and stalling                    |     |      |
| 64 |                 | Problems   |     |      |
| 65 |                 | Static and Stagnation states- Incompressible fluids and        |     |      |
|    | <b></b>         | perfect gases  |     |      |
| 66 | <b>Unit</b> – 2 | Overall isentropic efficiency, stage efficiency (their         |     |      |
|    |                 | comparison)  | 14% | 100% |
| 67 | TB2             | polytropic efficiency for both compression and expansion       |     |      |
|    |                 | processes  |     |      |
| 68 |                 | Reheat factor for expansion process                            |     |      |

### **Syllabus for Sectionals:**

| Sessional No. | Syllabus          |
|---------------|-------------------|
| T1            | Class No. 01 – 29 |
| T2            | Class No. 30 – 58 |
| Т3            | Class No. 59 – 68 |
